

Quik Trak®

...featuring Wirsbo's Quik Pak™

There's a big market for remodeling and retrofit projects. How can I take advantage of it? Poured floor underlayment is not an option for my customer. What can I offer instead? My customer has cold basement floors. What can I suggest?

**The answer is...
Quik Trak®**

What it is

- Quik Trak is a patented system of wood panels (7" X 48" or 10" X 48") attached to an aluminum transfer sheet. A groove down the center of the panel holds the Wirsbo $\frac{5}{16}$ " hePEX™plus tubing. Specially designed Return Traks with a "U" groove complete tubing returns.
- Quik Pak™ is a preassembled system of Quik Trak containing six panels fastened together with reinforced strapping tape.

RADIANT FLOORS
COMFORT HEATING

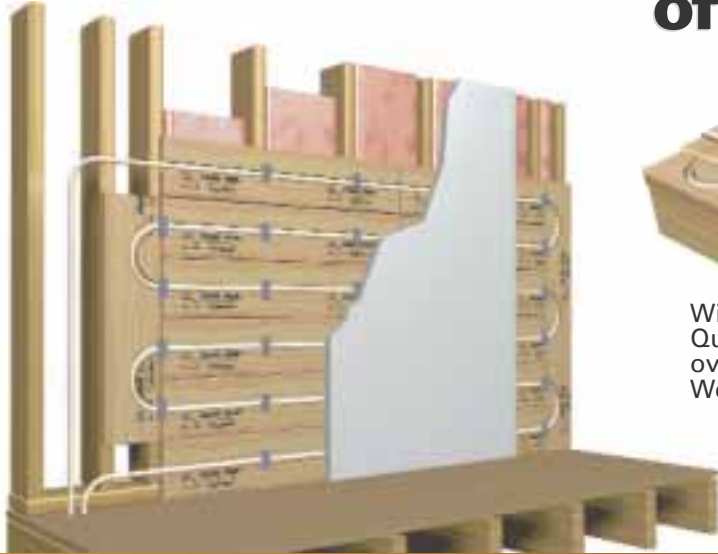

Why you'll like it

- Can be installed over an existing concrete slab or plywood subfloor.
- Offers an alternative to gypsum-based overpour and joist heating. Less burden on the construction schedule than gypsum overpour.
- Creates new opportunities for remodeling and retrofit.
- Thin profile – only $\frac{1}{2}$ " inch thick – adds minimal floor height, reducing the need to alter door moldings and baseboards.
- Excellent BTU output and lower thermal mass mean fast response time.
- Eliminates moisture and weight issues sometimes associated with poured floors.
- Efficient system design means minimum jobsite waste.
- Simple to plan and install and puts you in charge of the radiant installation from start to finish.
- New Quik Pak panels make installation even faster and easier.

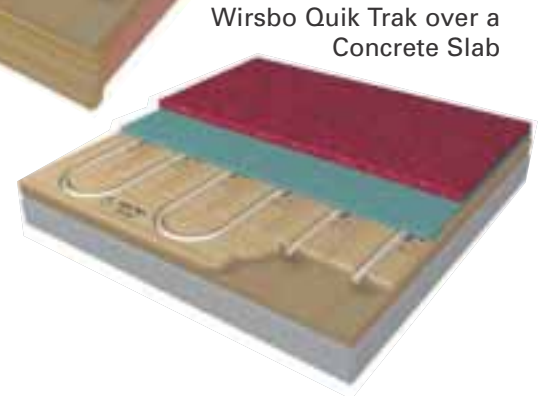

Easy Installation in a Variety of Construction Methods

Wirsbo Quik Trak for Radiant Wall Heating

Wirsbo Quik Trak over a Wood Subfloor

Wirsbo Quik Trak over a Concrete Slab

Quik Trak is practical, easy and cost-effective.

1. Quik Trak is easily installed over a subfloor.
2. A thin bead of silicone goes into the groove.
3. Press the tubing into the groove.
4. The installation is complete and ready for finished floors.
